

Empathy Map – Credit Card Approval Prediction

User:

Bank employees and customers who are involved in the credit card approval process are the main users of this system.

Think and Feel:

Customers want a quick approval process without unnecessary delays. Banks want accurate decisions with minimum financial risk.

Hear:

Users hear complaints about slow approval procedures and the need for faster digital services.

See:

Users observe that traditional verification methods require more documents and processing time.

Say and Do:

Customers provide personal and financial details for approval. Bank employees analyze information before making decisions.

Pain Points:

Long waiting time, manual verification, and incorrect approval decisions are common challenges.

Needs:

A simple prediction system that provides faster, accurate, and reliable credit card approval results.
